THE WEEKLY PEOPLE

45 ROSE STREET NEW YORK CITY

The Weekly People, being the Party-owned mouthpiece of the Socialist Labor Party of America, aims at industrial democracy through the integral industrial union and revolutionary working class political action. It is a complete Socialist weekly paper, and sells at $1.00 a year, 50 cents for six months, 25 cents for three months. A trial subscription of seven weeks may be had for 15 cents. Send for a free sample copy.
HISTORICAL MATERIALISM

BY

FREDERICK ENGELS

From the author's introduction to "Socialism, Utopian and Scientific"

NEW YORK

NEW YORK LABOR NEWS COMPANY

1916
FREDERICK ENGELS
The following essay was written by Frederick Engels in 1892, as an introduction to the first English edition of a previous work from his pen, entitled, "Socialism, Utopian and Scientific," which had already been published in nine of the languages spoken in Europe; namely, French, German, Spanish, Italian, Russian, Polish, Danish, Dutch, and Roumanian. That its publication in English came so late was no mere accident. It was, on the contrary, a very significant circumstance, sufficiently remarkable to provoke comment and require explanation. While the book had found interested readers among all classes of people in every part of the Continent, there had been no inquiry for it in England, even among the learned.

Manifestly, the tardiness of the British mind in taking up the philosophic study of Socialism could not be accounted for solely by the fact that the propagation of its doctrine had not yet resulted in Great Britain, as it had elsewhere, in a great working class movement, ominous of disaster to the capitalist fabric, but promising of happiness to man-
kind. Observers of social phenomena are expected to look beyond their immediate environment in space and time; for they are supposed to know that national boundaries, national institutions, and national prejudices oppose no longer impassable barriers to "foreign ideas." Insomuch, then, as the British philosophers, statesmen, economists, journalists, and other reputed thinkers or light-bearers of "the Empire" were in duty—if not to the common people, at least to the ruling classes—bound to watch the development of new conceptions and new forces abroad, they seemed in this instance to have been singularly remiss or wilfully blind. Not until a mighty wave of Socialism tore away from the German Ship of State the strongest helmsman of the age, did some of them begin to consider the nature of the force that could manifest itself with so much power. Their inquiry, however, was very superficial and has remained so to this day. It is not indeed very long since the most eminent and best emancipated of the English thinkers, namely, Herbert Spencer, illustrated in his own person—issued from the middle class and moving in its highest circles—his own theory of the influence of environment upon evolution, by working out a misconception of Socialism superlatively characteristic of all the ignorance and presumption of that class. And, as we write, it is safe to say that in England, outside a very small circle of class-conscious, obscure proletarians, who acquired their knowledge in the international movement, there is hardly a man who can claim to have studied and mastered the scientific propositions upon which Socialism is resting.

In the following pages Engels gives the true cause of this mental sluggishness in a country otherwise noted for its production of active intellects. The Materialist Conception of History is a fundamental requirement for the com-
PREFATORY NOTE.

prehension of Socialism as a scientific doctrine and of the Socialist Movement as a living fact. But, for reasons ably stated by our author, that is, owing to moral conditions, which are themselves a product of the historical materialism of England, such a conception is highly repugnant to the "feelings"—and to the interests—of the British "respectability."

Of course, whether it be on the European Continent, or in the British Isles, or in America, and whatever opinion or lack of opinion upon any subject may happen to be respectable among the exploiters of labor and their mouthpieces, the proletarian class can expect no aid from its oppressors in accomplishing its own emancipation. It must rely upon itself alone, and therefore be possessed of knowledge; such knowledge as it needs to carry it safely through the class struggle to final success; a "positive" knowledge, the foundation of which is the Materialist Conception of History.

LUCIEN SANIAL.

New York, January, 1902.
In every historical epoch, the prevailing mode of economic production and exchange, and the social organization necessarily following from it, form the basis upon which is built up, and from which alone can be explained, the political and intellectual history of that epoch.—Karl Marx.
HISTORICAL MATERIALISM

I am perfectly aware that the contents of this essay will meet with objection from a considerable portion of the British public. But if we Continentals had taken the slightest notice of the prejudices of British "respectability," we should be even worse off than we are. This book defends what we call "historical materialism," and the word materialism grates upon the ears of the immense majority of British readers. "Agnosticism" might be tolerated, but materialism is utterly inadmissible.

And yet the original home of all modern materialism, from the seventeenth century onwards, is England.

"Materialism is the natural-born son of Great Britain. Already the British schoolman, Duns Scotus, asked whether it was impossible for matter to think?"

"In order to effect this miracle, he took refuge in God's omnipotence, i. e., he made theology preach materialism. Moreover, he was a nominalist. Nominalism, the first form of materialism, is chiefly found among the English schoolmen.

"The real progenitor of English materialism is Bacon. To him natural philosophy is the only true philosophy, and physics based upon the experience of the senses is the chiefest part of natural philosophy. Anaxagoras and his homoiomeriae, Democritus and his atoms, he often quotes as his authorities. According to him the senses are infallible and the source of all knowledge. All science
HISTORICAL MATERIALISM.

is based on experience, and consists in subjecting the data furnished by the senses to a rational method of investigation. Induction, analysis, comparison, observation, experiment, are the principal forms of such a rational method. Among the qualities inherent in matter, motion is the first and foremost, not only in the form of mechanical and mathematical motion, but chiefly in the form of an impulse, a vital spirit, a tension—or a ‘qual,’ to use a term of Jacob Böhme’s¹—of matter.

“In Bacon, its first creator, materialism still occludes within itself the germs of a many-sided development. On the one hand, matter, surrounded by a sensuous, poetic glamour, seems to attract man’s whole entity by winning smiles. On the other, the aphoristically formulated doctrine pullulates with inconsistencies imported from theology.

“In its further evolution, materialism becomes one-sided. Hobbes is the man who systematizes Baconian materialism. Knowledge based upon the senses loses its poetic blossom, it passes into the abstract experience of the mathematician; geometry is proclaimed as the queen of sciences. Materialism takes to misanthropy. If it is to overcome its opponent, misanthropic, fleshless spiritualism, and that on the latter’s own ground, materialism has to chastise its own flesh and turn ascetic. Thus, from a sensual, it passes into an intellectual, entity; but thus, too, it evolves all the consistency, regardless of consequences, characteristic of the intellect.

“Hobbes, as Bacon’s continuator, argues thus: if all

¹ “Qual” is a philosophical play upon words. Qual literally means torture, a pain which drives to action of some kind; at the same time the mystic Böhme puts into the German word something of the meaning of the Latin “qualitas”; his “qual” was the activating principle arising from, and promoting in its turn, the spontaneous development of the thing, relation, or person subject to it, in contradistinction to a pain inflicted from without.
human knowledge is furnished by the senses, then our concepts and ideas are but the phantoms, divested of their sensual forms, of the real world. Philosophy can but give names to these phantoms. One name may be applied to more than one of them. There may even be names of names. It would imply a contradiction if, on the one hand, we maintained that all ideas had their origin in the world of sensation, and, on the other, that a word was more than a word; that besides the beings known to us by our senses, beings which are one and all individuals, there existed also beings of a general, not individual, nature. An unbodily substance is the same absurdity as an unbodily body. Body, being, substance, are but different terms for the same reality. It is impossible to separate thought from matter that thinks. This matter is the substratum of all changes going on in the world. The word infinite is meaningless, unless it states that our mind is capable of performing an endless process of addition. Only material things being perceptible to us, we cannot know anything about the existence of God. My own existence alone is certain. Every human passion is a mechanical movement which has a beginning and an end. The objects of impulse are what we call good. Man is subject to the same laws as nature. Power and freedom are identical.

"Hobbes had systematized Bacon, without, however, furnishing a proof for Bacon's fundamental principle, the origin of all human knowledge from the world of sensation. It was Locke who, in his Essay on the Human Understanding, supplied this proof.

"Hobbes had shattered the theistic prejudices of Baconian materialism; Collins, Dodwall, Coward, Hartley, Priestley similarly shattered the last theological bars that still hemmed in Locke's sensationalism. At all events,
for practical materialists, theism is but an easy-going way of getting rid of religion."\(^1\)

Thus Karl Marx wrote about the British origin of modern materialism. If Englishmen nowadays do not exactly relish the compliment he paid their ancestors, more's the pity. It is none the less undeniable that Bacon, Hobbes and Locke are the fathers of that brilliant school of French materialists which made the eighteenth century, in spite of all battles on land and sea won over Frenchmen by Germans and Englishmen, a pre-eminently French century, even before that crowning French Revolution, the results of which we outsiders, in England as well as in Germany, are still trying to acclimatize.

There is no denying it. About the middle of this century, what struck every cultivated foreigner who set up his residence in England, was, what he was then bound to consider the religious bigotry and stupidity of the English respectable middle class. We, at that time, were all materialists, or, at least, very advanced freethinkers, and to us it appeared inconceivable that almost all educated people in England should believe in all sorts of impossible miracles and that even geologists like Buckland and Mantell should contort the facts of their science so as not to clash too much with the myths of the book of Genesis; while, in order to find people who dared to use their own intellectual faculties with regard to religious matters, you had to go amongst the uneducated, the “great unwashed,” as they were then called, the working people, especially the Owenite Socialists.

But England has been “civilized” since then. The exhibition of 1851 sounded the knell of English insular exclusiveness. England became gradually international-

---

ized, in diet, in manners, in ideas; so much so that I begin to wish that some English manners and customs had made as much headway on the Continent as other continental habits have made here. Anyhow, the introduction and spread of salad-oil (before 1851 known only to the aristocracy) has been accompanied by a fatal spread of continental scepticism in matters religious, and it has come to this, that agnosticism, though not yet considered "the thing" quite as much as the Church of England, is yet very nearly on a par, as far as respectability goes, with Baptism, and decidedly ranks above the Salvation Army. And I cannot help believing that under these circumstances it will be consoling to many who sincerely regret and condemn this progress of infidelity, to learn that these "new-fangled notions" are not of foreign origin, are not "made in Germany," like so many other articles of daily use, but are undoubtedly Old English, and that their British originators two hundred years ago went a good deal further than their descendants now dare to venture.

What, indeed, is agnosticism, but, to use an expressive Lancashire term, "shamefaced" materialism? The agnostic's conception of Nature is materialistic throughout. The entire natural world is governed by law, and absolutely excludes the intervention of action from without. But, he adds, we have no means either of ascertaining or of disproving the existence of some Supreme Being beyond the known universe. Now, this might hold good at the time when Laplace, to Napoleon's question, why in the great astronomer's Mécanique céleste the Creator was not even mentioned, proudly replied: Je n'avais pas besoin de cette hypothèse. But nowadays, in our evolutionary conception of the universe, there is absolutely no room for either a Creator or a Ruler; and to talk of a Supreme Being shut out from the whole existing world, implies a
contradiction in terms, and, as it seems to me, a gratuitous insult to the feelings of religious people.

Again, our agnostic admits that all our knowledge is based upon the information imparted to us by our senses. But, he adds, how do we know that our senses give us correct representations of the objects we perceive through them? And he proceeds to inform us that, whenever he speaks of objects or their qualities, he does in reality not mean these objects and qualities, of which he cannot know anything for certain, but merely the impressions which they have produced on his senses. Now, this line of reasoning seems undoubtedly hard to beat by mere argumentation. But before there was argumentation, there was action. *Im Anfang war die That.* And human action had solved the difficulty long before human ingenuity invented it. The proof of the pudding is in the eating. From the moment we turn to our own use these objects, according to the qualities we perceive in them, we put to an infallible test the correctness or otherwise of our sense-perceptions. If these perceptions have been wrong, then our estimate of the use to which an object can be turned must also be wrong, and our attempt must fail. But if we succeed in accomplishing our aim, if we find that the object does agree with our idea of it, and does answer the purpose we intended it for, then that is positive proof that our perceptions of it and of its qualities, *so far,* agree with reality outside ourselves. And whenever we find ourselves face to face with a failure, then we generally are not long in making out the cause that made us fail; we find that the perception upon which we acted was either incomplete and superficial, or combined with the results of other perceptions in a way not warranted by them—what we call defective reasoning. So long as we take care to train and to use our senses properly, and to keep
our action within the limits prescribed by perceptions properly made and properly used, so long we shall find that the result of our action proves the conformity of our perceptions with the objective nature of the things perceived. Not in one single instance, so far, have we been led to the conclusion that our sense-perceptions, scientifically controlled, induce in our minds ideas respecting the outer world that are, by their very nature, at variance with reality, or that there is an inherent incompatibility between the outer world and our sense-perceptions of it.

But then come the Neo-Kantian agnostics and say: We may correctly perceive the qualities of a thing, but we cannot by any sensible or mental process grasp the thing in itself. This “thing in itself” is beyond our ken. To this Hegel, long since, has replied: If you know all the qualities of a thing, you know the thing itself; nothing remains but the fact that the said thing exists without us; and when your senses have taught you that fact, you have grasped the last remnant of the thing in itself, Kant’s celebrated unknowable Ding an sich. To which it may be added, that in Kant’s time our knowledge of natural objects was indeed so fragmentary that he might well suspect, behind the little we knew about each of them, a mysterious “thing in itself.” But one after another these ungraspable things have been grasped, analyzed, and, what is more, reproduced by the giant progress of science; and what we can produce, we certainly cannot consider as unknowable. To the chemistry of the first half of this century organic substances were such mysterious objects; now, we learn to build them up one after another from their chemical elements without the aid of organic processes. Modern chemists declare that as soon as the chemical constitution of no matter what body is known, it can be built up from its elements. We are still far from
knowing the constitution of the highest organic substances, the albuminous bodies; but there is no reason why we should not, if only after centuries, arrive at that knowledge and, armed with it, produce artificial albumen. But if we arrive at that, we shall at the same time have produced organic life, for life, from its lowest to its highest forms, is but the normal mode of existence of albuminous bodies.

As soon, however, as our agnostic has made these formal mental reservations, he talks and acts as the rank materialist he at bottom is. He may say that, as far as we know, matter and motion, or as it is now called, energy, can neither be created nor destroyed, but that we have no proof of their not having been created at some time or other. But if you try to use this admission against him in any particular case, he will quickly put you out of court. If he admits the possibility of spiritualism in abstracto, he will have none of it in concreto. As far as we know and can know, he will tell you there is no Creator and no Ruler of the universe; as far as we are concerned, matter and energy can neither be created nor annihilated; for us, mind is a mode of energy, a function of the brain; all we know is that the material world is governed by immutable laws, and so forth. Thus, as far as he is a scientific man, as far as he knows anything, he is a materialist; outside his science, in spheres about which he knows nothing, he translates his ignorance into Greek and calls it agnosticism.

At all events, one thing seems clear: even if I was an agnostic, it is evident that I could not describe the conception of history sketched out in this little book, as "historical agnosticism." Religious people would laugh at me, agnostics would indignantly ask, was I going to make fun of them? And thus I hope even British respectabil-
HISTORICAL MATERIALISM.

ity will not be overshocked if I use, in English as well as in so many other languages, the term, "historical materialism," to designate that view of the course of history, which seeks the ultimate cause and the great moving power of all important historic events in the economic development of society, in the changes in the modes of production and exchange, in the consequent division of society into distinct classes, and in the struggles of these classes against one another.

This indulgence will perhaps be accorded to me all the sooner if I show that historical materialism may be of advantage even to British respectability. I have mentioned the fact, that about forty or fifty years ago, any cultivated foreigner settling in England was struck by what he was then bound to consider the religious bigotry and stupidity of the English respectable middle class. I am now going to prove that the respectable English middle class of that time was not quite as stupid as it looked to the intelligent foreigner. Its religious leanings can be explained.

When Europe emerged from the Middle Ages, the rising middle class of the towns constituted its revolutionary element. It had conquered a recognized position within medieval feudal organizations, but this position, also, had become too narrow for its expansive power. The development of the middle class, the *bourgeoisie*, became

---

1 In the earlier days of feudalism the serfs especially privileged by their lord to carry on a craft usually settled at some point commanded by the seignorial castle or otherwise protected from foreign attack by walls and towers upon which the lord's men-at-arms mounted guard night and day. The town thus formed and fortified was called in French a "bourg" (in German, "burg"; in Scotch, "burgh"; in English, "borough"). The duly qualified craftsmen, artisans, and traders who inhabited it came therefore to be called "bourgeois," and as a body constituted the "bourgeoisie."

In the course of time many "bourgs" became singly or collectively strong enough to resist the exactions of their respective
incompatible with the maintenance of the feudal system; the feudal system, therefore, had to fall.

But the great international center of feudalism was the Roman Catholic Church. It united the whole of feudalized Western Europe, in spite of all internal wars, into one grand political system, opposed as much to the schismatic Greeks as to the Mohammedan countries. It surrounded feudal institutions with the halo of divine consecration. It had organized its own hierarchy on the feudal model, and, lastly, it was itself by far the most powerful feudal lord, holding, as it did, fully one-third of the soil of the Catholic world. Before profane feudalism could be successfully attacked in each country and in detail, this, its sacred central organization, had to be destroyed.

Moreover, parallel with the rise of the middle class went on the great revival of science; astronomy, mechanics, physics, anatomy, physiology, were again cultivated. And the bourgeoisie, for the development of its industrial production, required a science which ascended, and even to assert their independence when it happened that the latter had been weakened by conflicts among themselves or with the king. Moreover, as the exchange of products between the "bourgs" began to develop, the artisans and traders required other labor than their own to meet the growing demand for their wares. This was eagerly supplied by the rural serfs, who had remained at the complete mercy of the lords. Many of them ran away from the fertile fields on which they were not only held in bondage but starved, and took refuge in the "bourgs," where they could get a somewhat better living, also perchance a little more freedom, in the service of their former fellow serfs. Thus did, simultaneously with the formation of an exploiting mercantile class named the "Bourgeoisie," occur the formation of an exploited wage-working class named the "Proletariat"—that is, of a class of so-called free men, who, owning nothing but their labor-power, had to sell it in order to live and reproduce their kind. This expression, "the Proletariat," is indeed not less significant than appropriate, the Latin word "proles," from which it is derived, meaning "offspring." It was first applied in Rome to the same class of people, who, notwithstanding their absolute lack of possessions, were counted as "proletarii" in the census of Servius Tullius, because of the value of their kind to the State.
HISTORICAL MATERIALISM.

HISTORICAL MATERIALISM. 17.
tained the physical properties of natural objects and the
modes of action of the forces of Nature. Now up to then
science had but been the humble handmaid of the Church,
had not been allowed to overstep the limits set by faith,
and for that reason had been no science at all. Science
rebelled against the Church; the bourgeoisie could not do
without science, and, therefore, had to join in the rebel-

The above, though touching but two of the points where
the rising middle class was bound to come into collision
with the established religion, will be sufficient to show,
first, that the class most directly interested in the struggle
against the pretensions of the Roman Church was the
bourgeoisie; and, second, that every struggle against
feudalism, at that time, had to take on a religious disguise,
had to be directed against the Church in the first instance.
But if the universities and the traders of the cities started
the cry, it was sure to find, and did find, a strong echo in
the masses of the country people, the peasants, who every-
where had to struggle for their very existence with their
feudal lords, spiritual and temporal.

The long fight of the bourgeoisie against feudalism cul-
minated in three great, decisive battles.

The first was what is called the Protestant Reforma-
tion in Germany. The war-cry raised against the Church
by Luther was responded to by two insurrections of a
political nature: first, that of the lower nobility under
Franz von Sickingen, 1523; then the great Peasants' War,
1525. Both were defeated, chiefly in consequence of the
indecision of the parties most interested, the burghers of
the towns—an indecision into the causes of which we can-
not here enter. From that moment the struggle degen-
erated into a fight between the local princes and the central
power, and ended by blotting out Germany for two hun-
dred years from the politically active nations of Europe. The Lutheran reformation produced a new creed indeed, a religion adapted to absolute monarchy. No sooner were the peasants of Northeast Germany converted to Lutheranism than they were from freemen reduced to serfs.

But where Luther failed, Calvin won the day. Calvin's creed was one fit for the boldest of the bourgeoisie of his time. His predestination doctrine was the religious expression of the fact that in the commercial world of competition success or failure does not depend upon a man's activity or cleverness, but upon circumstances uncontrollable by him. It is not of him that willeth, or of him that runneth, but of the mercy of unknown superior economic powers; and this was especially true at a period of economic revolution, when all old commercial routes and centers were replaced by new ones, when India and America were opened to the world, and when even the most sacred economic articles of faith—the value of gold and silver—began to totter and to break down. Calvin's church constitution was thoroughly democratic and republican; and where the kingdom of God was Republicanized, could the kingdoms of this world remain subject to monarchs, bishops, and lords? While German Lutheranism became a willing tool in the hands of princes, Calvinism founded a republic in Holland, and active republican parties in England, and, above all, Scotland.

In Calvinism, the second great bourgeois upheaval found its doctrine ready cut and dried. This upheaval took place in England. The middle class of the towns brought it on, and the yeomanry of the country districts fought it out. Curiously enough, in all the three great bourgeois risings, the peasantry furnishes the army that has to do the fighting; and the peasantry is just the class that, the victory once gained, is most surely ruined by the
economic consequences of that victory. A hundred years after Cromwell, the yeomanry of England had almost disappeared. Anyhow, had it not been for that yeomanry and for the plebeian element in the towns, the bourgeoisie alone would never have fought the matter out to the bitter end, and would never have brought Charles I. to the scaffold. In order to secure even those conquests of the bourgeoisie that were ripe for gathering at the time, the revolution had to be carried considerably further—exactly as in 1793 in France and 1848 in Germany. This seems, in fact, to be one of the laws of evolution of bourgeois society.

Well, upon this excess of revolutionary activity there necessarily followed the inevitable reaction which in its turn went beyond the point where it might have maintained itself. After a series of oscillations, the new center of gravity was at last attained and became a new starting-point. The grand period of English history, known to respectability under the name of “the Great Rebellion,” and the struggles succeeding it, were brought to a close by the comparatively puny event entitled by Liberal historians, “the Glorious Revolution.”

The new starting-point was a compromise between the rising middle class and the ex-feudal landowners. The latter, though called, as now, the aristocracy, had been long since on the way which led them to become what Louis Philippe in France became at a much later period, “the first bourgeois of the kingdom.” Fortunately for England, the old feudal barons had killed one another during the Wars of the Roses. Their successors, though mostly scions of the old families, had been so much out of the direct line of descent that they constituted quite a new body, with habits and tendencies far more bourgeois than feudal. They fully understood the value of money,
and at once began to increase their rents by turning hundreds of small farmers out and replacing them by sheep. Henry VIII., while squandering the Church lands, created fresh bourgeois landlords by wholesale; the innumerable confiscations of estates, regranted to absolute or relative upstarts, and continued during the whole of the seventeenth century, had the same result. Consequently, ever since Henry VII., the English "aristocracy," far from counteracting the development of industrial production, had, on the contrary, sought to indirectly profit thereby; and there had always been a section of the great landowners willing, from economical or political reasons, to co-operate with the leading men of the financial and industrial bourgeoisie. The compromise of 1689 was, therefore, easily accomplished. The political spoils of "pelf and place" were left to the great landowning families, provided the economic interests of the financial, manufacturing and commercial middle class were sufficiently attended to. And these economic interests were at that time powerful enough to determine the general policy of the nation. There might be squabbles about matters of detail, but, on the whole, the aristocratic oligarchy knew too well that its own economic prosperity was irretrievably bound up with that of the industrial and commercial middle class.

From that time, the bourgeoisie was a humble, but still a recognized component of the ruling classes of England. With the rest of them, it had a common interest in keeping in subjection the great working mass of the nation. The merchant or manufacturer himself stood in the position of master, or, as it was until lately called, of "natural superior" to his clerks, his workpeople, his domestic servants. His interest was to get as much and as good work out of them as he could; for this end they had to be
trained to proper submission. He was himself religious; his religion had supplied the standard under which he had fought the king and the lords; he was not long in discovering the opportunities this same religion offered him for working upon the minds of his natural inferiors, and making them submissive to the behests of the masters it had pleased God to place over them. In short, the English bourgeoisie now had to take a part in keeping down the "lower orders," the great producing mass of the nation, and one of the means employed for that purpose was the influence of religion.

There was another fact that contributed to strengthen the religious leanings of the bourgeoisie. That was the rise of materialism in England. This new doctrine not only shocked the pious feelings of the middle class; it announced itself as a philosophy only fit for scholars and cultivated men of the world, in contrast to religion which was good enough for the uneducated masses, including the bourgeoisie. With Hobbes it stepped on the stage as a defender of royal prerogative and omnipotence; it called upon absolute monarchy to keep down that puer robustus sed malitiousus, to wit, the people. Similarly, with the successors of Hobbes, with Bolingbroke, Shaftesbury, etc., the new deistic form of materialism remained an aristocratic, esoteric doctrine, and, therefore, hateful to the middle class, both for its religious heresy and for its antibourgeois political connections. Accordingly, in opposition to the materialism and deism of the aristocracy, those Protestant sects which had furnished the flag and the fighting contingent against the Stuarts, continued to furnish the main strength of the progressive middle class, and form even to-day the backbone of "the Great Liberal Party."

In the meantime materialism passed from England to
France, where it met and coalesced with another materialistic school of philosophers, a branch of Cartesianism. In France, too, it remained at first an exclusively aristocratic doctrine. But soon its revolutionary character asserted itself. The French materialists did not limit their criticism to matters of religious belief; they extended it to whatever scientific tradition or political institution they met with; and to prove the claim of their doctrine to universal application, they took the shortest cut and boldly applied it to all subjects of knowledge in the giant work after which they were named—the Encyclopédie. Thus, in one or the other of its two forms—avowed materialism or deism—it became the creed of the whole cultured youth of France; so much so that, when the great Revolution broke out, the doctrine hatched by English Royalists gave a theoretical flag to French Republicans and Terrorists, and furnished the text for the Declaration of the Rights of Man. The great French Revolution was the third uprising of the bourgeoisie, but the first that had entirely cast off the religious cloak, and was fought out on undisguised political lines; it was the first, too, that was really fought out up to the destruction of one of the combatants, the aristocracy, and the complete triumph of the other, the bourgeoisie. In England the continuity of pre-revolutionary and post-revolutionary institutions, and the compromise between landlords and capitalists, found its expression in the continuity of judicial precedents and in the religious preservation of the feudal forms of the law. In France the Revolution constituted a complete breach with the traditions of the past; it cleared out the very last vestiges of feudalism, and created in the Code Civil a masterly adaptation of the old Roman law—that almost perfect expression of the juridical relations corresponding to the economic stage called
HISTORICAL MATERIALISM.

by Marx the production of commodities—to modern capitalistic conditions; so masterly that this French revolutionary code still serves as a model for reforms of the law of property in all other countries, not excepting England. Let us, however, not forget that if English law continues to express the economic relations of capitalistic society in that barbarous feudal language which corresponds to the thing expressed just as English spelling corresponds to English pronunciation—vous écrivez Londres et vous prononcez Constantinople, said a Frenchman (you write London and you pronounce it Constantinople)—that same English law is the only one which has preserved through ages, and transmitted to America and the Colonies the best part of that old Germanic personal freedom, local self-government, and independence from all interference but that of the law courts, which on the Continent has been lost during the period of absolute monarchy, and has nowhere been as yet fully recovered.

To return to our British bourgeois. The French Revolution gave him a splendid opportunity, with the help of the Continental monarchies, to destroy French maritime commerce, to annex French colonies, and to crush the last French pretensions to maritime rivalry. That was one reason why he fought it. Another was that the ways of this revolution went very much against his grain. Not only its “execrable” terrorism, but the very attempt to carry bourgeois rule to extremes. What should the British bourgeois do without his aristocracy, that taught him manners, such as they were, and invented fashions for him—that furnished officers for the army, which kept order at home, and the navy, which conquered colonial possessions and new markets abroad? There was indeed a progressive minority of the bourgeoisie, that minority whose interests were not so well attended to under the
compromise; this section, composed chiefly of the less wealthy middle class, did sympathize with the Revolution, but it was powerless in Parliament.

Thus, if materialism became the creed of the French Revolution, the God-fearing English bourgeois held all the faster to his religion. Had not the reign of terror in Paris proved what was the upshot, if the religious instincts of the masses were lost? The more materialism spread from France to neighboring countries, and was reinforced by similar doctrinal currents, notably by German philosophy, the more, in fact, materialism and freethought generally became, on the Continent, the necessary qualifications of a cultivated man, the more stubbornly the English middle class stuck to its manifold religious creeds. These creeds might differ from one another, but they were, all of them, distinctly religious, Christian creeds.

While the Revolution insured the political triumph of the bourgeoisie in France, in England Watt, Arkwright, Cartwright, and others, initiated an industrial revolution, which completely shifted the center of gravity of economic power. The wealth of the bourgeoisie increased considerably faster than that of the landed aristocracy. Within the bourgeoisie itself, the financial aristocracy, the bankers, etc., were more and more pushed into the background by the manufacturers. The compromise of 1689, even after the gradual changes it had undergone in favor of the bourgeoisie, no longer corresponded to the relative position of the parties to it. The character of these parties, too, had changed; the bourgeoisie of 1830 was very different from that of the preceding century. The political power still left to the aristocracy, and used by them to resist the pretensions of the new industrial bourgeoisie, became incompatible with the new economic interests. A
HISTORICAL MATERIALISM.

fresh struggle with the aristocracy was necessary; it could end only in a victory of the new economic power. First, the Reform Act was pushed through, in spite of all resistance, under the impulse of the French Revolution of 1830. It gave to the bourgeoisie a recognized and powerful place in Parliament. Then the Repeal of the Corn Laws, which settled, once for all, the supremacy of the bourgeoisie, and especially of its most active portion, the manufacturers, over the landed aristocracy. This was the greatest victory of the bourgeoisie; it was, however, also the last it gained in its own exclusive interest. Whatever triumphs it obtained later on, it had to share with a new social power, first its ally, but soon its rival.

The industrial revolution had created a class of large manufacturing capitalists, but also a class—and a far more numerous one—of manufacturing workpeople. This class gradually increased in numbers, in proportion as the industrial revolution seized upon one branch of manufacture after another, and in the same proportion it increased in power. This power it proved as early as 1824, by forcing a reluctant Parliament to repeal the acts forbidding combinations of workmen. During the Reform agitation, the workingmen constituted the Radical wing of the Reform party; the Act of 1832 having excluded them from the suffrage, they formulated their demands in the People’s Charter, and constituted themselves in opposition to the great bourgeois Anti-Corn Law party, into an independent party, the Chartists, the first workingmen’s party of modern times.

Then came the Continental revolutions of February and March, 1848, in which the working people played such a prominent part, and, at least in Paris, put forward demands which were certainly inadmissible from the point of view of capitalist society. And then came the gen-
eral reaction. First the defeat of the Chartists on the 10th of April, 1848, then the crushing of the Paris workingmen's insurrection in June of the same year, then the disasters of 1849 in Italy, Hungary, South Germany, and at last the victory of Louis Bonaparte over Paris, 2d December, 1851. For a time, at least, the bugbear of working class pretensions was put down, but at what cost! If the British bourgeois had been convinced before of the necessity of maintaining the common people in a religious mood, how much more must he feel that necessity after all these experiences? Regardless of the sneers of his Continental comrades, he continued to spend thousands and tens of thousands, year after year, upon the evangelization of the lower orders; not content with his own native religious machinery, he appealed to Brother Jonathan, the greatest organizer in existence of religion as a trade, and imported from America revivalism, Moody and Sankey, and the like; and, finally, he accepted the dangerous aid of the Salvation Army, which revives the propaganda of early Christianity, appeals to the poor as the elect, fights capitalism in a religious way, and thus fosters an element of early Christian class antagonism, which one day may become troublesome to the well-to-do people who now find the ready money for it.

It seems a law of historical development that the bourgeoisie can in no European country get hold of political power—at least for any length of time—in the same exclusive way in which the feudal aristocracy kept hold of it during the Middle Ages. Even in France, where feudalism was completely extinguished, the bourgeoisie, as a whole, has held full possession of the Government for very short periods only. During Louis Philippe's reign, 1830-48, a very small portion of the bourgeoisie ruled the kingdom; by far the larger part were excluded from the:
HISTORICAL MATERIALISM.

suffrage by the high qualification. Under the second Republic, 1848-51, the whole bourgeoisie ruled, but for three years only; their incapacity brought on the second Empire. It is only now, in the third Republic, that the bourgeoisie as a whole have kept possession of the helm for more than twenty years; and they are already showing lively signs of decadence. A durable reign of the bourgeoisie has been possible only in countries like America, where feudalism was unknown, and society at the very beginning started from a bourgeois basis. And even in France and America, the successors of the bourgeoisie, the working people, are already knocking at the door.

In England, the bourgeoisie never held undivided sway. Even the victory of 1832 left the landed aristocracy in almost exclusive possession of all the leading Government offices. The meekness with which the wealthy middle class submitted to this, remained inconceivable to me until the great Liberal manufacturer, Mr. W. A. Forster, in a public speech implored the young men of Bradford to learn French, as a means to get on in the world, and quoted from his own experience how sheepish he looked when, as a Cabinet Minister, he had to move in society where French was, at least, as necessary as English! The fact was, the English middle class of that time were, as a rule, quite uneducated upstarts, and could not help leaving to the aristocracy those superior Government places where other qualifications were required than mere insular narrowness and insular conceit, seasoned by business sharpness.¹ Even now the endless newspaper de-

¹And even in business matters, the conceit of national Chauvinism is but a sorry adviser. Up to quite recently, the average English manufacturer considered it derogatory from an Englishman to speak any language but his own, and felt rather proud than otherwise of the fact that “poor devils” of foreigners settled in England and took off his hands the trouble of disposing of his products abroad. He never noticed that these foreigners, mostly
bates about middle class education show that the English middle class does not yet consider itself good enough for the best education, and looks to something more modest. Thus, even after the Repeal of the Corn Laws, it appeared a matter of course, that the men who had carried the day, the Cobdens, Brights, Forsters, etc., should remain excluded from a share in the official government of the country, until twenty years afterwards, a new Reform Act opened to them the door of the Cabinet. The English bourgeoisie are, up to the present day, so deeply penetrated by a sense of their social inferiority that they keep up, at their own expense and that of the nation, an ornamental caste of drones to represent the nation worthily at all state functions; and they consider themselves highly honored whenever one of themselves is found worthy of admission into this select and privileged body, manufactured, after all, by themselves.

The industrial and commercial middle class had, therefore, not yet succeeded in driving the landed aristocracy completely from political power when another competitor, the working class, appeared on the stage. The reaction after the Chartist movement and the Continental revolutions, as well as the unparalleled extension of English Germans, thus got command of a very large part of British foreign trade, imports and exports, and that the direct foreign trade of Englishmen became limited, almost entirely, to the colonies, China, the United States, and South America. Nor did he notice that these Germans traded with other Germans abroad, who gradually organized a complete network of commercial colonies all over the world. But when Germany, about forty years ago, seriously began manufacturing for export, this network served her admirably in her transformation, in so short a time, from a corn-exporting into a first-rate manufacturing country. Then, about ten years ago, the British manufacturer got frightened, and asked his ambassadors and consuls how it was that he could no longer keep his customers together. The unanimous answer was: (1) You don't learn your customer's language, but expect him to speak your own; (2) You don't even try to suit your customer's wants, habits, and tastes, but expect him to conform to your English ones.
HISTORICAL MATERIALISM.

trade from 1848 to 1866 (ascribed vulgarly to Free Trade alone, but due far more to the colossal development of railways, ocean steamers, and means of intercourse generally), had again driven the working class into the dependency of the Liberal party, of which they formed, as in pre-Chartist times, the Radical wing. Their claims to the franchise, however, gradually became irresistible; while the Whig leaders of the Liberals "funked," Disraeli showed his superiority by making the Tories seize the favorable moment and introduce household suffrage in the boroughs, along with a redistribution of seats. Then followed the ballot; then in 1884 the extension of household suffrage to the counties and a fresh redistribution of seats, by which electoral districts were to some extent equalized. All these measures considerably increased the electoral power of the working class, so much so that in at least one hundred and fifty to two hundred constituencies that class now furnishes the majority of voters. But parliamentary government is a capital school for teaching respect for tradition; if the middle class look with awe and veneration upon what Lord John Manners playfully called "our old nobility," the mass of the working people then looked up with respect and deference to what used to be designated as "their betters," the middle class. Indeed, the British workman, some fifteen years ago, was the model workman, whose respectful regard for the position of his master, and whose self-restraining modesty in claiming rights for himself, consoled our German economists of the Katheder-Socialist school for the incurable communistic and revolutionary tendencies of their own workingmen at home.

But the English middle class—good men of business as they are—saw farther than the German professors. They had shared their power but reluctantly with the
working class. They had learned, during the Chartist years, what that *puer robustus sed malitious*, the people, is capable of. And since that time, they had been compelled to incorporate the better part of the People's Charter in the Statutes of the United Kingdom. Now, if ever, the people must be kept in order by moral means, and the first and foremost of all moral means of action upon the masses is and remains—religion. Hence the parsons' majorities on the School Boards, hence the increasing self-taxation of the bourgeoisie for the support of all sorts of revivalism, from ritualism to the Salvation Army.

And now came the triumph of British respectability over the freethought and religious laxity of the Continental bourgeoisie. The workmen of France and Germany had become rebellious. They were thoroughly infected with socialism, and, for very good reasons, were not at all particular as to the legality of the means by which to secure their own ascendancy. The *puer robustus*, here, turned from day to day more *malitious*. Nothing remained to the French and German bourgeoisie as a last resource but to silently drop their freethought, as a youngster, when sea-sickness creeps upon him, quietly drops the burning cigar he brought swaggeringly on board; one by one, the scoffers turned pious in outward behavior, spoke with respect of the Church, its dogmas and rites, and even conformed with the latter as far as could not be helped. French bourgeoisie dined *maigre* on Fridays, and German ones sat out long Protestant sermons in their pews on Sundays. They had come to grief with materialism. "*Die Religion muss dem Volk erhalten werden,״—religion must be kept alive for the people—that was the only and the last means to save society from utter ruin. Unfortunately for themselves, they did not find this out until they had done their level best to
break up religion for ever. And now it was the turn of
the British bourgeois to sneer and to say: "Why, you
fools, I could have told you that two hundred years ago!"

However, I am afraid neither the religious stolidity of
the British, nor the *post festum* conversion of the Conti-
nental bourgeois will stem the rising Proletarian tide.
Tradition is a great retarding force, is the *vis inertiae* of
history, but, being merely passive, is sure to be broken
down; and thus religion will be no lasting safeguard to
capitalist society. If our juridical, philosophical, and re-
ligious ideas are the more or less remote offshoots of the
economic relations prevailing in a given society, such
ideas cannot, in the long run, withstand the effects of a
complete change in these relations. And, unless we be-
lieve in supernatural revelation, we must admit that no
religious tenets will ever suffice to prop up a tottering so-
ciety.

In fact, in England, too, the working people have be-
gun to move again. They are, no doubt, shackled by tra-
ditions of various kinds. Bourgeois traditions, such as
the widespread belief that there can be but two parties,
Conservatives and Liberals, and that the working class
must work out its salvation by and through the greatLiberal party. Workingmen’s traditions, inherited from
their first tentative efforts at independent action, such as
the exclusion, from ever so many old Trade Unions, of all
applicants who have not gone through a regular appren-
ticeship; which means the breeding, by every such union,
of its own blacklegs. But for all that the English work-
ing class is moving, as even Professor Brentano has sor-
rrowfully had to report to his brother Katheder-Socialists.
It moves, like all things in England, with a slow and
measured step, with hesitation here, with more or less un-
fruitful, tentative attempts there; it moves now and then
with an over-cautious mistrust of the name of Socialism, while it gradually absorbs the substance; and the movement spreads and seizes one layer of the workers after another. It has now shaken out of their torpor the unskilled laborers of the East End of London, and we all know what a splendid impulse these fresh forces have given it in return. And if the pace of the movement is not up to the impatience of some people, let them not forget that it is the working class which keeps alive the finest qualities of the English character, and that, if a step in advance is once gained in England, it is, as a rule, never lost afterwards. If the sons of the old Chartists, for reasons explained above, were not quite up to the mark, the grandsons bid fair to be worthy of their forefathers.

But the triumph of the European working class does not depend upon England alone. It can only be secured by the co-operation of, at least, England, France, and Germany. In both the latter countries the working class movement is well ahead of England. In Germany it is even within measurable distance of success. The progress it has there made during the last twenty-five years is unparalleled. It advances with ever-increasing velocity. If the German middle class have shown themselves lamentably deficient in political capacity, discipline, courage, energy, and perseverance, the German working class have given ample proof of all these qualities. Four hundred years ago, Germany was the starting-point of the first upheaval of the European middle class; as things are now, is it outside the limits of possibility that Germany will be the scene, too, of the first great victory of the European proletariat?

F. ENGELS.
The Woman Question is not a question by itself; it is a part of the great social problem. Proceeding along this line, Bebel's work is an exhaustive analysis of the economic position of woman in the past and present. Despite the boasts of Capitalist Christianity the facts show that under Capitalism woman, especially of the working class, is degraded and dwarfed physically and mentally, while the word home is but a mockery. From such condition of parenthood the child is stunted before its birth, and the miasmas, bred from woman's economic slavery, rise so high that even the gilded houses of the capitalist class are polluted. Under Socialism, woman, having economic freedom equal with man, will develop mentally and physically, and the mentally and physically stunted and dwarfed children of the capitalist system will give way to a new race. The blow that breaks the chains of economic slavery from the workingman will free woman also.

EUGENE SUE'S
The Mysteries of the People
__OR__
History of a Proletarian Family Across the Ages

A fascinating work, thrilling as fiction, yet embracing a comprehensive history of the oppressing and oppressed classes from the commencement of the present era.

These stories are nineteen in number, and their chronological order is the following:

- Eugene Sue wrote a romance which seems to have disappeared in a curious fashion, called "Les Mysteres du Peuple". It is the story of a Gallic family through the ages, told in successive episodes, and, so far as we have been able to read it, is fully as interesting as "The Wandering Jew" or "The Mysteries of Paris". The French edition is pretty hard to find, and only parts have been translated into English. We don't know the reason. One medieval episode, telling of the struggle of the communes for freedom, is now translated by Mr. Daniel Le Leon, under the title, "The Pilgrim's Shell" (New York Labor News Co.). We trust the success of his efforts may be such as to lead him to translate the rest of the romance. It will be the first time the feat has been done in English.—N. Y. Sun.
